

Controlpanel

PHP versie wijzigen

Je kan de PHP versie die op je domeinnaam actief is, of enkel van een specifiek subdomein, zelf wijzigen via ons controlpanel.

1. Login op het controlpanel

2. Klik na het inloggen op PHP Settings.

Controlpanel

The screenshot shows the Mihos.net Controlpanel interface. On the left, a sidebar lists various management options: Websites & Domains (selected), Mail, Applications, Files, Databases, Statistics, Users, and Account. The main content area is titled "Websites & Domains" and contains a sub-section for "Website at httpdocs/". This section includes links for Hosting Settings, Open, Suspend, Disable, and Description. Below these are several management tools: File Manager, Mail, Databases (highlighted in grey), Add Database, Web Hosting Access, FTP Access, Hosting Settings, Applications, File Manager, Web Statistics, DNS Settings, Email Addresses, Mail Settings, SSL Certificates, Password-Protected Directories, Logs, and Web Users. A red box highlights the "PHP Settings" link, which displays the message "PHP version: 5.6.17". To the right, there are two boxes: "Databases", "Scheduled Tasks", "WordPress", "Mihos Webmail", "MihosBuilder", "MihosDrive", and "MihosPush"; and "Resource Usage" showing disk space (0% used of 3 GB) and traffic (0 MB/month used of 100 GB/month).

3. Selecteer bij PHP support de gewenste PHP versie: 5.4, 5.6 of 7.x.

Controlpanel

The screenshot shows the Mihos.net Controlpanel interface. The left sidebar has a red header 'Websites & Domains' containing 'Websites & Domains', 'Mail', 'Applications', 'Files', 'Databases', 'Statistics', 'Users', and 'Account'. The main content area is titled 'PHP Settings'. It displays the PHP configuration for the website, stating that changes affect the website only. It includes placeholder information for {DOCROOT}, {WEBSPACEROOT}, and {TMP}. It shows PHP support at version 5.6.17, run as a FastCGI application. Below this, it lists PHP versions 5.4.45, 5.6.17, and 7.0.2, with '5.6.17' being the active one. A link to 'View the phpinfo() page' is available.
